This book considers the effectiveness and fairness of using international cooperation to obtain confession evidence or evidence of a suspect or accused person's silence across borders. This is a question of balance in limiting and protecting the right to silence. The functioning of the applicable law in Denmark, England and Wales and Australia is analysed in relation to investigative and trial measures such as police questioning, administrative questioning powers, covert surveillance and the use of silence as evidence of guilt. On the national level, this work examines the way in which domestic rules balance the right to silence in national criminal proceedings, and whether investigative and trial rules produce continuity throughout the criminal proceedings as a whole. From the transnational perspective, comparative legal analysis is used to determine whether the national continuity may be disrupted to such an extent that cooperation in the gathering of confession evidence causes unfairness. From the international perspective, this research compares the right to silence under the ICCPR and the ECHR to identify the overall effect of cooperating under particular human rights frameworks on the question of balance.

This book offers an introduction to the key legal and ethical topics confronting Australian journalists and strategic communicators both at home and internationally and offers a suite of reflective techniques for navigating them. It starts by positioning morals, ethics, and the law in their historical and philosophical frameworks by tracing the evolution of free expression and professional media ethics. Media law and ethics are then contextualized in their modern international human rights framework. Readers are equipped with a skill set for reflecting on the law and ethics of professional media dilemmas – including mindful reflection, the Potter Box, journaling, concept mapping, and discussion. Such approaches are then applied to key topic areas, including free expression; reputation; confidentiality; privacy; justice; intellectual property; national security; discrimination and harassment; and conflicted interests. Each is examined in terms of its philosophical underpinnings, relationship to human rights, professional ethical context, international examples, legal principles, key Australian laws, legal cases, and strategies for applying reflective practice techniques. It concludes on a confident note – imploring communicators to engage in constructive and mindful strategic communication with the authority and confidence that results from a working knowledge of media law and ethics. This handbook is for professional communicators and students in all fields, but particularly in journalism, public relations, corporate communication, media relations, and marketing.

'Because the law of defamation is about reputation and thus necessarily about community and social attitudes, Baker's serious empirical analysis of just those community and social attitudes about defamation and about reputation is a novel and important contribution to the literature on libel and slander. It will be a useful corrective to the various empirically unsupported assertions that dominate the court cases and the academic literature on the topic.' Frederick Schauer, University of Virginia, US 'This book shines a welcome light on a neglected area of defamation law: how juries and judges determine what it means to say a statement is defamatory. The author employs well-designed empirical research to provide concrete answers, and the reform he proposes is sensible and workable. The book should be must-reading for anyone who seeks to understand how the law does or does not protect reputation especially lawyers and judges who try libel cases.' David A. Anderson, University of Texas Law School, US 'When defamation jurors decide whether a statement about someone is \"defamatory\"

This book describes the new generation of discrete choice methods, focusing on the many advances that are made possible by simulation. Researchers use these statistical methods to examine the choices that consumers, households, firms, and other agents make. Each of the major models is covered: logit, generalized extreme value, or GEV (including nested and cross-nested logits), probit, and mixed logit, plus a variety of specifications that build on these basics. Simulation-assisted estimation procedures are investigated and compared, including maximum stimulated likelihood, method of simulated moments, and method of simulated scores. Procedures for drawing from densities are described, including variance reduction techniques such as antithetics and Halton draws. Recent advances in Bayesian procedures are explored, including the use of the Metropolis-Hastings algorithm and its variant Gibbs sampling. The second edition adds chapters on endogeneity and expectation-maximization (EM) algorithms. No other book incorporates all these fields, which have arisen in the past 25 years. The procedures are applicable in many fields, including energy, transportation, environmental studies, health, labor, and marketing.
